

SHAUN MHERE

Electronic Engineer

500 Houghton Park, Harare | shaunmhere10@gmail.com | +263 783 599 155 [Linkedin](#)

PROFILE

Electronic Engineering professional with hands-on experience in network administration, solar & security systems, and AI-driven solutions, currently pursuing CCNA certification.

SKILLS

Network Design • Router&Switch Configuration (IPv4/IPv6) • LAN/WAN Setup • Wireless Deployment (WPA2/WPA3) • Firewall Management • Biometric Access Control • CCTV Integration • Solar System Configuration • Inverter & Battery Setup • Weighbridge Installation & Calibration • PowerShell • Python •Bash Scripting• MATLAB • Cisco Packet Tracer • GNS3 • Google Workspace • Microsoft 365 Admin • Wireshark • Packet Analysis • Local RAG system Deployment • LLM Fine-tuning • Cybersecurity Best practices • Problem Solving

EXPERIENCE

Senior Technician | **McVick Enterprises** *Kadoma | Start: December 2024 | Ongoing*

- Configured solar, inverters, and battery systems for 10+ sites while deploying CCTV and biometrics security solutions across 20+ sites, maintaining a 95% first-contact resolution rate on technical troubleshooting calls.

IT Administrator | **Eland Oak Junior School** *Harare | Start: January 2024 | End: December 2024*

- Managed campus network infrastructure, biometric attendance systems, and ICT training for 40+ staff across 30+ classroom and back-office systems, providing hands-on troubleshooting for hardware, connectivity, and software.

Intern | **GPM Engineering** *Harare | Start: August 2023 End: January 2024*

- Assembled and calibrated 100+ load cells and weighing terminals in accordance with Zimbabwean trade standards to guarantee 100% measurement accuracy for industrial clients.

PROJECTS COMPLETED

Water Leakage Detection System ~ Engineered and deployed a robust IoT-driven water leakage detection system integrating ESP32 microcontrollers, GPS modules, and flow sensors for real-time pipeline diagnostics.

Microcontroller Based Electrical Load Monitoring and Control System ~ Designed and implemented a microcontroller-based electrical load monitoring and control system using the PIC16F877A, enabling continuous real-time tracking of voltage, current, and power consumption. Integrated Blynk Android and web platforms for remote visualization and control, providing users with actionable insights into energy usage.

EDUCATION

HARARE INSTITUTE OF TECHNOLOGY	CLASS
Bachelor of Technology Honors in Electronic Engineering	Upper Second

CERTIFICATIONS

- Google Cybersecurity - Cisco Certified Network Associate (CCNA)	Ongoing
